

# Special Issue

## Advances in Human Papillomavirus Infection Research

### Message from the Guest Editor

Human papillomavirus (HPV) is the most common sexually transmitted agent. The biology of the virus and its link with malignancies is well established, with cancers involving the anogenital (cervical, vaginal, vulvar, penile, anal) tract as well as the head and neck. The aim of this Special Issue is to provide insights into the mechanism of development of HPV-associated benign and malignant lesions. For this purpose, I invite you to submit research articles, review articles, and short communications related to HPV, such as virus–host interactions, signaling pathways, immune evasion, epigenomics, clinical studies, and therapeutics. As a of this Special Issue, I look forward to reviewing your submissions and, together, helping to define the present state of science.

## About the Journal

### Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, AGRIS, and other databases.

#### Journal Rank:

JCR - Q2 (Microbiology) / CiteScore - Q1 (Microbiology (medical))

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.2 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the first half of 2025).
