

# Special Issue

## Microbiota in Human Health and Disease

### Message from the Guest Editors

In this special collection, we extend an invitation to researchers to submit manuscripts falling within the broad scope of "Microbiota in Human Health and Disease". We welcome original research papers that focus on the interplay between microbial communities and their hosts. Review articles and case studies will also be considered. The primary focus of this collection is to showcase studies that not only deepen our understanding of the implications of changes in microbiota composition for disease states but also offer valuable insights into translational applications. Manuscripts exploring avenues for therapeutic and preventive interventions are of particular interest.

## About the Journal

### Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, AGRIS, and other databases.

#### Journal Rank:

JCR - Q2 (Microbiology) / CiteScore - Q1 (Microbiology (medical))

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.2 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the first half of 2025).
