Special Issue

Common Clinical Viral Pathogens: Detection and Treatment

Message from the Guest Editor

This Special Issue, "Common Clinical Viral Pathogens: Detection and Treatment," will be focused on research exploring the identification and study of, and treatment strategies for commonly encountered clinical viral pathogens in both human and animal populations. For example, research on rabies, mpox, HPV, HIV and SARS-CoV-2 will be included. We invite submissions of original research and reviews that investigate areas such as molecular diagnostic methods, serology. genomic studies, the development of vaccines, immune markers, and antiviral treatments. Research on zoonotic viral pathogens, which can impact both human health and animal health, is particularly welcomed. The goal of this Special Issue is to offer a broad view of how research on viral pathogens can help improve outcomes for patients, guide public health policies, and inform future research directions. We hope this collection of studies will be thought-provoking, encourage collaboration, and advance our understanding of these important infectious diseases.

About the Journal

Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

Editor-in-Chief

Dr. Nico Jehmlich

Department of Molecular Toxicology, UFZ-Helmholtz Centre for Environmental Research, 04318 Leipzig, Germany

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, AGRIS, and other databases.

Journal Rank:

JCR - Q2 (Microbiology) / CiteScore - Q1 (Microbiology (medical))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.2 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the first half of 2025).
