

# Special Issue

## Antimicrobial Resistance in Enterobacteriaceae and Enterococci

### Message from the Guest Editor

This Special Issue attempts to bring together significant contributions regarding the factors that contribute to the emergence, dissemination, management, and control of Antimicrobial resistance in these important bacterial groups. Contributions may include molecular mechanisms, clinical implications, and epidemiological dimensions of AMR.

We extend an invitation to researchers to contribute through research articles, reviews, short communications, and case reports.

## About the Journal

### Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, AGRIS, and other databases.

#### Journal Rank:

JCR - Q2 (Microbiology) / CiteScore - Q1 (Microbiology (medical))

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 20 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the second half of 2025).
