

## Special Issue

# Novel Strategies in the Study of the Human Gut Microbiota 2.0

### Message from the Guest Editor

The homeostasis of the human gastrointestinal tract is strictly dependent on the resident gut microbiota, a complex and plastic community of thousands of microbial species that live permanently or more or less temporarily in the intestinal lumen or in association with the intestinal mucosa. The study of the composition and fluctuation of the intestinal microbiota in healthy humans and in particular diseases may be of great help for the comprehension of the roles that microbes play in sustaining host health as well as of the interactions between microbes and human cells. From this perspective, such studies might take advantage of animal models or in vitro systems aimed at mimicking the intestinal environment. As the of this Special Issue, I invite you to submit research articles, review articles, and short communications related to “Novel Strategies in the Study of the Human Gut Microbiota”. Keywords: gut microbiota; homeostasis; probiotics; prebiotics; animal models; in vitro models

## About the Journal

### Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, AGRIS, and other databases.

#### Journal Rank:

JCR - Q2 (Microbiology) / CiteScore - Q1 (Microbiology (medical))

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.2 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the first half of 2025).
