

Special Issue

Emerging Research on Tick-Borne Pathogens and Diseases

Message from the Guest Editors

Recently, it was reported that the estimated rate of global *Borrelia burgdorferi* seropositivity is at 1.2 billion people, and that tick-borne diseases are on the rise. In some countries, tick-borne diseases are not recognized as major health issues, and cases are not officially reported. In addition, in a field of polarized conversation with respect to Post-Treatment Lyme Disease Syndrome (PTLDS), Debilitating Symptom Complexes Attributed To Ticks (DSCATT), or Chronic Lyme (CL), research-based evidence should be allowed to take a place in the narrative. To circumvent the rise in tick-borne disease cases, it is imperative that emerging research in tick-borne pathogens and diseases becomes a focus for many stakeholders and receives the attention it deserves. This Special Issue, entitled “Emerging Research on Tick-Borne Pathogens and Diseases”, seeks the submission of original research papers. The aim of this Special Issue is to provide cutting-edge research that will improve awareness of tick-borne diseases, with the hope that basic research in this area will allow actionable clinical studies to improve awareness and patient outcomes.

About the Journal

Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

Editor-in-Chief

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, AGRIS, and other databases.

Journal Rank:

JCR - Q2 (Microbiology) / CiteScore - Q1 (Microbiology (medical))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 20 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the second half of 2025).
