## Natural Antimicrobials and Green Technologies to Improve Food Safety

### Message from the Guest Editors

Extending the shelf-life of food products according to food safety is a major concern of both producers and consumers, especially when dealing with a green technology approach. Researchers have developed different methods to contribute to this topic, and this Special Issue aims to collect original research articles, short communications, and reviews, on all aspects of food preservation by employing natural antimicrobials or applying green technologies to extend food products shelf-life or improve food safety.

## About the Journal

### Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPus / SciFinder, AGRIS, and other databases.

#### Journal Rank:

JCR - Q2 (Microbiology) / CiteScore - Q1 (Microbiology (medical))

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.2 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the first half of 2025).
