

# Special Issue

## Cyclospora cayetanensis and Cyclosporiasis

### Message from the Guest Editors

*Cyclospora cayetanensis* is an emerging and important cause of foodborne outbreaks of enteric disease in many developed countries, which are mostly associated with the consumption of contaminated fresh produce. Infection by *C. cayetanensis* is remarkably seasonal worldwide, although it varies by geographical regions. The most susceptible populations are children, foreigners, and immunocompromised patients in endemic countries, while in industrialized countries, *C. cayetanensis* affects people of any age. There are no animal models, and/or in vivo and in vitro culture systems to facilitate *C. cayetanensis* research, and many of the epidemiological aspects of this parasitic disease remain unknown. In addition, there is an urgent need for an effective genotyping method for source tracking in outbreak investigations. The aim of this Special Issue is to provide a comprehensive, up-to-date overview of the current knowledge on *C. cayetanensis* and cyclosporiasis, including general biology, molecular biology, diagnosis, epidemiology, outbreaks, clinical disease, treatment, control, and prevention. We welcome research articles, reviews, and short communications related to these topics.

## About the Journal

### Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, AGRIS, and other databases.

#### Journal Rank:

JCR - Q2 (Microbiology) / CiteScore - Q1 (Microbiology (medical))

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 20 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the second half of 2025).
