Special Issue

Airborne Microbes and Their Potential Influence

Message from the Guest Editors

Airborne microbes are ubiquitous in the atmosphere, being present at a density of 103 to 107 cells per cubic meter. These microbes are emitted from both natural and anthropogenic sources such as terrestrial, soil, forest, desert, composting, and agricultural activities, as well as city, wetland, and marine environments. These organisms are exposed to hostile conditions, including scarcity of nutrients, UV radiation, desiccation, temperature and pH shifts, and the presence of reactive oxygen species. Airborne microbes are known to play an important role in agriculture, public health, cloud formation, global climate, pollutant degradation, and atmospheric dynamics. Moreover, these microbes provide a medium for the spread of diseases.As the of the Special Issue, it is my pleasure to invite you to submit research articles, reviews, and short communications related to the biology of airborne microbes and their role in human health and climate, with the hope that this issue represents a suitable good platform to support the improvement of research related to airborne microbes. Prof. Dr. Tanaka Daisuke

About the Journal

Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

Editor-in-Chief

Dr. Nico Jehmlich
Department of Molecular Toxicology, UFZ-Helmholtz Centre for Environmental Research, 04318 Leipzig, Germany

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, AGRIS, and other databases.

Journal Rank:

JCR - Q2 (Microbiology) / CiteScore - Q1 (Microbiology (medical))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.2 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the first half of 2025).
