

Special Issue

Animal Viral Evolution

Message from the Guest Editors

Natural selection plays a critical role in shaping the evolutionary dynamics of DNA and RNA viral populations. Multiple mechanisms including positive and negative selection, recombination, selection relaxation, codon and dinucleotide usage among others represent some of the mechanisms promoting the adaptation of these populations. In this context, an understanding of the different evolutionary dynamic signatures of these populations is critical component to control viral diseases. Animal populations are subject to infection with a variety of viral agents. Currently, animal diseases represent a real threat to the worldwide economy. Zoonotic diseases can also have significant public health implications. With the ever-evolving evolution of viral agents within human populations, there is a risk for zoonanthroponotic transmission events in animal populations, promoting the potential adaptation of human pathogens in animal populations, a situation that might complicate the control of these pathogens.

In this special issue, we are inviting you to send contributions concerning any aspect related to the evolution of DNA and RNA viruses with the potential to affect animal populations.

About the Journal

Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

Editor-in-Chief

Dr. Nico Jehmlich

Department of Molecular Toxicology, UFZ-Helmholtz Centre for Environmental Research, 04318 Leipzig, Germany

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, AGRIS, and other databases.

Journal Rank:

JCR - Q2 (Microbiology) / CiteScore - Q1 (Microbiology (medical))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 20 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the second half of 2025).
