

# Special Issue

## Research in Hospital Infection Control

### Message from the Guest Editors

Infection control in healthcare settings is of paramount importance, not only to protect vulnerable patients, but also for healthcare staff. Effective infection control interventions could potentially save patients from serious health complications that could prolong hospital stays, creating pressure on bed capacity and adding to the cost of healthcare provision. They also allow healthcare staff to continue their care provision with confidence. This Special Issue of the journal *Microorganisms* aims to bring together up to date information on the most effective and practical hospital infection control interventions, and invites papers from researchers and infection control specialists. We welcome papers describing original research, or reviews providing a critical and constructive analysis of the existing published literature. Manuscripts that only deal with clinical management/policy/healthcare will only be acceptable in rare cases. Keywords

- hospital infection control
- hospital acquired infection
- healthcare worker
- personal protective equipment, hygiene
- disease transmission
- disinfection
- Covid-19

## About the Journal

### Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, AGRIS, and other databases.

#### Journal Rank:

JCR - Q2 (Microbiology) / CiteScore - Q1 (Microbiology (medical))

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.2 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the first half of 2025).
