Special Issue

Microbial Cell Factories: Production of Amino Acids Using Microorganisms

Message from the Guest Editors

As for microbial producers, some species such as *Escherichia coli* and *C. glutamicum* have been developed as microbial cell factories through metabolic engineering. Genome analysis and systems biological approaches have contributed to determination of the mechanism of amino acid overproduction in microbial cell factories. Recently, synthetic biology methods, including experimental robot automation and artificial intelligence-based metabolic pathway design, are improving microbial cell factories and taking them to the next level. For this Special Issue, you are invited to submit either review articles or original research articles on any aspect of microbial cell factories for producing amino acids, which can include achievements using microbial producers, mechanisms underlying how microbial cell factories overproduce amino acids revealed by recent technology, and the latest technologies for analyzing or designing microbial cell factories.

About the Journal

Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

Editor-in-Chief

Dr. Nico Jehmlich
Department of Molecular Toxicology, UFZ-Helmholtz Centre for Environmental Research, 04318 Leipzig, Germany

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, AGRIS, and other databases.

Journal Rank:

JCR - Q2 (Microbiology) / CiteScore - Q1 (Microbiology (medical))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 20 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the second half of 2025).
