

# Special Issue

## Microorganisms and Marine Biodeterioration

### Message from the Guest Editors

Organic and inorganic pollution of our oceans is currently of considerable concern. Microorganisms obviously add to these concerns when they are animal or plant pathogens, but we are becoming increasingly aware of the impact of non-pathogenic microorganisms, i.e., algae, archaea, bacteria and fungi, and their potential to ameliorate pollution by degrading aquatic pollutants, such as microplastics and fuels. The identification of the plastisphere, for example, the microbial biofilm that develops on the surface of immersed microplastics, could lead to the development of a species or set of species that can efficiently break down the polluting microparticles. This Special Issue, covering the microbial activities that lead to the breakdown of materials and the ways in which Humankind can influence them, both positively and negatively, provides an up-to-date view of the importance of microbial biodeterioration in the marine environment.

## About the Journal

### Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, AGRIS, and other databases.

#### Journal Rank:

JCR - Q2 (Microbiology) / CiteScore - Q1 (Microbiology (medical))

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 20 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the second half of 2025).
