

# Special Issue

## Interaction between Inorganic Pollutants and Microbiota in the Environment 2.0

### Message from the Guest Editors

This Special Issue is a continuation of our 2021 Special Issue, "[Interaction between Inorganic Pollutants and Microbiota in the Environment](#)". The Special Issue aims to collect cutting-edge studies on this subject—in particular, to provide a holistic view of the microbial processes affecting the fate of inorganic pollutants in the environment and the effect of these chemicals on native microbial communities' structure and functions. Papers will be selected by peer review, with the expected outcome being the wide dissemination of research results. Original research articles and review articles on the above aspects of inorganic pollutants in the environment are of interest.

## About the Journal

### Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, AGRIS, and other databases.

#### Journal Rank:

JCR - Q2 (Microbiology) / CiteScore - Q1 (Microbiology (medical))

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 20 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the second half of 2025).
