

Special Issue

Research on Antimicrobial Activity of Natural Products, Second Edition

Message from the Guest Editors

Microbial infections are responsible for millions of deaths every year and worldwide. The increased resistance to antimicrobial drugs, such as antibiotics, is the main cause and is one of the biggest challenges in human and animal health and in food safety. It is well known that human pathogenic microorganisms resistant to major classes of antibiotics have increased. Therefore, the search for the discovery of new antimicrobial agents is in urgent demand. Finding therapeutic powers in nature is an ancient but increasingly actual idea. In recent years, strategies to overcome the resistance of antibiotics have been suggested, namely the use of phytochemicals. Natural compounds have already proved to be effective and safe sources of antimicrobial compounds and eco-friendly methodologies focused on reducing the growth of pathogenic microorganisms. This Special Issue is directed to ethnopharmacologists, botanists, microbiologists, and natural-products chemists working on developing new approaches for the treatment of infectious diseases. Papers based on the investigation of new sources of natural antimicrobial compounds or mechanisms of action of natural compounds are most welcome.

About the Journal

Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

Editor-in-Chief

Environmental Research, 04318 Leipzig, Germany

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, AGRIS, and other databases.

Journal Rank:

JCR - Q2 (Microbiology) / CiteScore - Q1 (Microbiology (medical))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.2 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the first half of 2025).
