New Advances in Management and Treatment of *Acinetobacter baumannii* Infections

Message from the Guest Editor

Infections caused by MDR *Acinetobacter baumannii* (MDR-AB) represent a major problem in patients admitted to hospital, especially intensive care units. Inappropriate therapy and limited therapeutic options are responsible for negative impact on outcome and this infection is associated with high mortality rates. New agents with microbiological activity against MDR-AB strains have been recently developed but further real-life data are needed. Early diagnosis and adequate administration of antimicrobials are the milestone for the management of critically ill patients, and data about therapeutic approach when use monotherapy and when combination therapy, are limited. On these bases, physicians should recognize peculiar clinical characteristics and treat MDR-AB infections appropriately in hospitalized patients. This Special Issue aims to collect papers on *Acinetobacter baumannii* infections to better define the management and treatment of this difficult-to-treat infection. For this Special Issue, we invite to submit research articles, review articles, case series and clinical cases on the current status of *Acinetobacter baumannii* infections, especially in critically-ill patients.

About the Journal

Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism as a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

Editor-in-Chief

Dr. Nico Jehmlich

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, AGRIS, and other databases.

Journal Rank:

JCR - Q2 (Microbiology) / CiteScore - Q1 (Microbiology (medical))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 20 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the second half of 2025).
