

# Special Issue

## One Health Research on Zoonotic Tick-Borne Pathogens

### Message from the Guest Editor

Tick-borne zoonotic infections have a major impact on human and animal health worldwide. Vector tick is a hematophagous arthropod infested on various vertebrate hosts and it can transmit various zoonotic pathogens including bacteria, viruses, rickettsia and protozoa. The aim of this Special Issue is to provide cutting-edge research that will improve awareness of tick-borne pathogens and zoonotic infections. For this purpose, we invite authors to submit original research articles, review articles, and short communications related to various aspects of tick-borne pathogens including diagnostics, epidemiology, surveillance and prevention.

## About the Journal

### Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPus / SciFinder, AGRIS, and other databases.

#### Journal Rank:

JCR - Q2 (Microbiology) / CiteScore - Q1 (Microbiology (medical))

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.2 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the first half of 2025).
