Special Issue

Influenza Prevention: Exploring the Progress and Persevering through Challenges

Message from the Guest Editors

It is well known that seasonal influenza vaccination is among the most effective public health means to prevent and reduce the epidemiological, clinical, socioeconomic burden of disease.

As recommended by the World Health Organization (WHO), it is important to expand immunization programs for seasonal influenza vaccination for the following target populations: healthcare workers, individuals with comorbidities and underlying medical conditions, older adults, pregnant women, children, and other groups at a high risk of severe influenza in congregate-living settings. Despite its proven effectiveness and policy recommendations, seasonal influenza vaccination coverage rates in most industrialized countries are still low. Increasing seasonal vaccination within priority groups is a key strategy to lessen the burden of influenza.

This Special Issue focuses on the importance of influenza prevention in human health, and the advances in research leading to the development of better preventive strategies, exploring the latest innovations and challenges in tackling this important health issue.

About the Journal

Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, AGRIS, and other databases.

Journal Rank:

JCR - Q2 (Microbiology) / CiteScore - Q1 (Microbiology (medical))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.2 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the first half of 2025).
