

# Special Issue

## Amoebic Gill Disease

### Message from the Guest Editors

In this Special Issue, we welcome original research or review papers that present novel findings on amoebic gill disease.

Potential topics include, but are not limited to:

- a) amoebae causing gill infections;
- b) host–parasite interactions in amoebic gill disease;
- b) epidemiology and risk factors for outbreaks of amoebic gill disease;
- c) development of experimental vaccines or treatments to control amoebic gill disease.

In this Special Issue, we hope to present new knowledge within the area of amoebic gill disease. A collection of high-impact articles on this subject may raise awareness about this important problem in farmed fish and contribute new fundamental and applied knowledge to help us further understand and combat this disease.

---

## About the Journal

### Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, AGRIS, and other databases.

#### Journal Rank:

JCR - Q2 (Microbiology) / CiteScore - Q1 (Microbiology (medical))

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 20 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the second half of 2025).
