

# Special Issue

## Genetics, Genomics, Physiology and Biochemistry of Rhizobium

### Message from the Guest Editor

Rhizobia have long been studied because of their ability to interact with and form a symbiotic association with legumes. Studies have encompassed many different approaches and spanned a number of different species. This Special Issue aims to present research on any aspect of Rhizobia, either as a symbiont or as a free-living organism. The overall focus of the work should be on the microorganism.

### Guest Editor

Prof. Dr. Ivan J Oresnik

Department of Microbiology, University of Manitoba, Winnipeg, MB R3T 2N2, Canada

## About the Journal

### Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, AGRIS, and other databases.

#### Journal Rank:

JCR - Q2 (Microbiology) / CiteScore - Q1 (Microbiology (medical))

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.2 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the first half of 2025).
