

# Special Issue

## Infections and Sepsis

### Message from the Guest Editor

Infection and sepsis are leading causes of death in both community and hospital settings. Indeed, nosocomial infection due to drug-resistant bacteria is an increasing worrisome clinical challenge. Critically ill patients, such as those admitted to intensive care units, and patients with altered immune functions are at higher risk of developing infections and sepsis. The aim of this Special Issue is to collect original research and review articles focusing on clinical outcomes, pathogenesis, epidemiology, and other clinically relevant aspects of infections and sepsis, both community and hospital-acquired, especially in patients at risk.

## About the Journal

### Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, AGRIS, and other databases.

#### Journal Rank:

JCR - Q2 (Microbiology) / CiteScore - Q1 (Microbiology (medical))

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 20 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the second half of 2025).
