

# Special Issue

## Novel Insights into the Mechanisms of Microbial Transcription and Translation

### Message from the Guest Editor

Despite the growing appreciation for the complexity of the regulatory mechanisms that govern microbial transcription and translation, our understanding of the functional dynamics of these macromolecular machines is still in its infancy. For this Special Issue, we invite you to send contributions on key aspects of the microbial transcription and translation machinery, with particular focus given to the regulatory functions of coding and non-coding RNAs, including research on bacteria, archaea, protists, and other unicellular organisms.

### Guest Editor

Dr. Peter Sarin

## About the Journal

### Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, AGRIS, and other databases.

#### Journal Rank:

JCR - Q2 (Microbiology) / CiteScore - Q1 (Microbiology (medical))

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.2 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the first half of 2025).
