## Rift Valley Fever Virus Infections

### Message from the Guest Editors

RVF is endemic in several sub-Saharan countries, but recently it repeatedly demonstrated the capacity to spread outside its historical endemic area, in various desert-like territories north of Sahara, thus drawing the attention of the international scientific community and health organizations for the possible risks of RVF dissemination far behind the borders of the African continents. Several epidemiological factors have been appointed as potential drivers of this spread, but many studies are still needed to clarify the relevant epidemiological features playing a substantial role in the ecosystems. This Special Issue on "Rift Valley Fever Virus Infections" aims at collecting new contributions about recent findings on the epidemiology and pathogenesis of this zoonosis, clinical observations and innovative diagnostic aspects in animals and humans as well as new approaches and recent experiences in the surveillance, prevention and control of the infection. With this general aim, this Special Issue aims to provide a picture of the current knowledge on the epidemiological patterns and the changes recently observed for RVF with relevance for health.

# About the Journal

## Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism as a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

## Author Benefits

### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, AGRIS, and other databases.

### Journal Rank:

JCR - Q2 (Microbiology) / CiteScore - Q1 (Microbiology (medical))

### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 20 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the second half of 2025).
