

Special Issue

Schistosoma and Schistosomiasis

Message from the Guest Editor

Schistosomiasis is a chronic parasitic disease caused by a parasite of the *Schistosoma* genus. It is the most prevalent neglected tropical disease in sub-Saharan Africa. It remains a great public health problem in several tropical and subtropical countries. Moreover, since 2013, several clusters of urogenital schistosomiasis have emerged on Corsica Island (France) determining that this disease is not just tropical. Several complementary approaches have been developed to fight against this pathogen. For this Special Issue, we invite send manuscripts with a broad panel of methodologies, from lab molecular studies to field approaches, aiming to understand the parasite for better control.

About the Journal

Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

Editor-in-Chief

Dr. Nico Jehmlich

Environmental Research, 04318 Leipzig, Germany

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, AGRIS, and other databases.

Journal Rank:

JCR - Q2 (Microbiology) / CiteScore - Q1 (Microbiology (medical))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.2 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the first half of 2025).
