Clay Minerals: From Paleoclimatic and Paleoenvironmental Indicators to Industrial Raw Materials

Guest Editors:

Dr. Elisa Laita Florian
Department of Geology, University of Jaén, 23071 Jaén, Spain

Dr. Javier García Rivas
Department of Mineralogy and Petrology, Complutense University of Madrid, 28040 Madrid, Spain

Dr. Isabel Abad
Department of Geology, University of Jaén, 23071 Jaén, Spain

Deadline for manuscript submissions:
closed (30 November 2025)

Message from the Guest Editors

Clays and clay minerals constitute important mineral resources from scientific and industrial perspectives. The genesis of clay minerals take place when low-temperature aqueous solutions interact with rocks on the Earth's surface. Certain factors such as the environment, the temperature, the amount of water available, or the type of weathered rock determine the clay minerals formed. Therefore, clay minerals can provide information about the paleoclimate or paleoenvironment under which they were formed. Besides, clays are also materials of great industrial and economic interest. Currently, clays are used in many types of industries since they constitute important components used in the manufacturing of many products, such as plastics, paper, cement, absorbent materials, ceramic and refractory materials, among others. The physical and chemical characterization of different clays (e.g., kaolin, smectites, fibrous clays) is interesting since their industrial applications are closely related to their structure and composition. We invite you to contribute to Special Issue "Clay Minerals: From Paleoclimatic and Paleoenvironmental Indicators to Industrial Raw Materials".

Message from the Editor-in-Chief

Minerals welcomes submissions that report basic and applied research in mineralogy. Research areas of traditional interest are mineral deposits, mining, mineral processing and environmental mineralogy. The journal footprint also includes novel uses of elemental and isotopic analyses of minerals for petrology, geochronology and thermochronology, thermobarometry, ore genesis and sedimentary provenance. Contributions are encouraged in emerging research areas such as applications of quantitative mineralogy to the oil and gas, manufacturing, forensic science, climate change, geohazard and health sectors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.
High Visibility: indexed within Scopus, SCIE (Web of Science), GEOBASE, GeoRef, CaPlus / SciFinder, Inspec, Astrophysics Data System, AGRIS, and other databases.
Journal Rank: JCR - Q2 (Mining and Mineral Processing) / CiteScore - Q1 (Geology)
