Gem Deposits: Mineralogical and Gemological Aspects

Guest Editors:

Prof. Dr. Andy H. Shen

Gemmological Institute, China
University of Geosciences, Wuhan
430074, China

Dr. Chaowen Wang

Gemmological Institute, China
University of Geosciences,
Wuhan, China

Prof. Dr. Bo Xu

School of Gemmology, State Key
Laboratory of Geological
Processes and Mineral
Resources, China University of
Geosciences, Beijing, China

Deadline for manuscript
submissions:

closed (31 July 2023)

Message from the Guest Editors

Dear Colleagues,

Gemstones have been widely used in the manufacture of jewelry and art crafts as early as 7000 years ago. As the demand for gemstones increases, numerous new gem deposits have been exploited and new gem species have infiltrated the market. However, the same species of gemstones that share similar qualities can possess a wide range of values in the market, as a result of their geographic origins. In the gem and jewelry trade, increasing attention is being paid to the geographic origin of gemstones. Collections from a reliable gem deposit play a vital role in determining the geographic origin of certain gemstones. This Special Issue aims to present the latest, cutting-edge advances in gem deposits in relation to mineralogy, petrology, and gemology. The combined researches of the related specific fields (for instance, geology, field gemology, geochemistry, geochronology, and spectroscopy) can provide important information concerning the formation of gemstones, enabling the comparison and geographic determination of gemstones worldwide.

Message from the Editor-in-Chief

Minerals welcomes submissions that report basic and applied research in mineralogy. Research areas of traditional interest are mineral deposits, mining, mineral processing and environmental mineralogy. The journal footprint also includes novel uses of elemental and isotopic analyses of minerals for petrology, geochronology and thermochronology, thermobarometry, ore genesis and sedimentary provenance. Contributions are encouraged in emerging research areas such as applications of quantitative mineralogy to the oil and gas, manufacturing, forensic science, climate change, geohazard and health sectors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), GeoRef, CaPlus / SciFinder, Inspec, Astrophysics Data System, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Mining & Mineral Processing*) / CiteScore - Q2 (*Geology*)
