CITESCORE 4.1

Modern Luminescence Spectroscopy of Minerals

Guest Editor:

Prof. Dr. Michael Gaft
Department of Physics, Ariel University, Ariel, West Bank, Israel

Deadline for manuscript submissions:
closed (31 October 2019)

Message from the Guest Editor

Dear Colleagues,

Laser based spectroscopy has become an integral part of the routine analytical tools applied in mineralogy. Increased, and currently still even further increasing, use of different kinds of spectroscopy is favored by a number of aspects, including the availability of reliable spectrometer systems in many institutions worldwide. A shortcoming, however, still exists, namely, the limited availability of comprehensive and dependable spectrum databases comprising modern spectroscopy spectra. Researchers often are obliged to do troublesome literature searches, in order to find reliable references backing up their own analytical findings and interpretations. The following fields will be covered: laser induced time resolved luminescence, optically stimulated luminescence, Laser Induced Breakdown Spectroscopy (LIBS), Infrared spectroscopy, Raman Spectroscopy. Special manuscripts will be devoted to combination of laser-based spectroscopy with other techniques, such as optical spectroscopy, laser ablation techniques and electron paramagnetic resonance (EPR).

Message from the Editor-in-Chief

Minerals welcomes submissions that report basic and applied research in mineralogy. Research areas of traditional interest are mineral deposits, mining, mineral processing and environmental mineralogy. The journal footprint also includes novel uses of elemental and isotopic analyses of minerals for petrology, geochronology and thermochronology, thermobarometry, ore genesis and sedimentary provenance. Contributions are encouraged in emerging research areas such as applications of quantitative mineralogy to the oil and gas, manufacturing, forensic science, climate change, geohazard and health sectors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.
High Visibility: indexed within Scopus, SCIE (Web of Science), GeoRef, CaPlus / SciFinder, Inspec, Astrophysics Data System, AGRIS, and other databases.
Journal Rank: JCR - Q2 (*Geochemistry and Geophysics*) / CiteScore - Q2 (*Geology*)
