Message from the Guest Editors

After hundreds of years of the exploitation of mining resources, the demand for these resources has continued to increase. The demand will be maintained and increase in the future to face the significant challenges of engineering and society. To meet these challenges, tools are needed to help understand, improve, and facilitate more effective solutions. The use of modeling at all levels and types is undoubtedly one of those tools...The Special Issue welcomes review articles, regular articles, and short notes that cover different methodologies for modeling, design, optimization, and analysis in problems of adsorption, leaching, flotation, and magnetic separation, among others. Tools for the study of multiphase systems at different time and size scales are also welcome such as molecular modeling, computational fluid dynamics, response surface methodology, artificial intelligence, multiscale modeling, uncertainty and global sensitivity analyses, and optimization.

Minerals welcomes submissions that report basic and applied research in mineralogy. Research areas of traditional interest are mineral deposits, mining, mineral processing and environmental mineralogy. The journal footprint also includes novel uses of elemental and isotopic analyses of minerals for petrology, geochronology and thermochronology, thermobarometry, ore genesis and sedimentary provenance. Contributions are encouraged in emerging research areas such as applications of quantitative mineralogy to the oil and gas, manufacturing, forensic science, climate change, geohazard and health sectors.

Author Benefits

Open Access:— free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), GeoRef, CaPlus / SciFinder, Inspec, and many other databases.

Journal Rank: JCR - Q2 (Mining & Mineral Processing) / 2020 CiteScore - Q2 (Geology)
