UK

### Message from the Guest Editors

Different types of fossil organic matter and carbonaceous products from gasification, pyrolysis and combustion processes of fossil and organic biomass, as well as natural and synthetic graphite and amorphous carbon, display Raman spectral features that allow us to obtain structural information of these materials. This Special Issue aims to present investigations in relation to the application of the *Raman spectroscopy* analysis of these carbonaceous materials either occurring in rocks of different geological contexts, or as industry products or by-products of other processes (e.g., char from coal combustion and gasification, among others).

We invite researchers to contribute to the Special Issue: “Raman Spectroscopy Characterization of Fossil Organic Matter, Char and Graphite”.

Deadline for manuscript  
submissions:

**closed (16 December 2022)**

## Editor-in-Chief

## Message from the Editor-in-Chief

*Minerals* welcomes submissions that report basic and applied research in mineralogy. Research areas of traditional interest are mineral deposits, mining, mineral processing and environmental mineralogy. The journal footprint also includes novel uses of elemental and isotopic analyses of minerals for petrology, geochronology and thermochronology, thermobarometry, ore genesis and sedimentary provenance. Contributions are encouraged in emerging research areas such as applications of quantitative mineralogy to the oil and gas, manufacturing, forensic science, climate change, geohazard and health sectors.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), GeoRef, CaPlus / SciFinder, Inspec, Astrophysics Data System, AGRIS, and other databases.

**Journal Rank:** JCR - Q2 (*Mining & Mineral Processing*) / CiteScore - Q2 (*Geology*)
