submissions:
closed (17 February 2023)

Message from the Guest Editor

For a long period of time, particular attention was paid to glauconitisation in unburied sediments lying on the continental shelves of present oceans. The processes observed and analyzed may have served as models for studies of glauconite in neritic zones of Cenozoic or even Mesozoic basins. Access to the sedimentary domains of the deep oceans, particularly those of contouritic accumulation, has made it possible to discover new aspects of glauconitization. Thus, the prevailing control by fairly high temperature water has become obsolete, and the influence of the nature of continental flows has become differently analysed.

Sediments from contouritic accumulation provide a condensed and undisturbed sedimentary record without long periods of sediment erosion. Glauconitic grains could possibly integrate the signature of bottom water masses over prolonged periods of time, which, while preventing their use in high-resolution studies, would provide an effective means for yielding reliable average estimates on past ϵNd signatures of bottom water masses.

Message from the Editor-in-Chief

Minerals welcomes submissions that report basic and applied research in mineralogy. Research areas of traditional interest are mineral deposits, mining, mineral processing and environmental mineralogy. The journal footprint also includes novel uses of elemental and isotopic analyses of minerals for petrology, geochronology and thermochronology, thermobarometry, ore genesis and sedimentary provenance. Contributions are encouraged in emerging research areas such as applications of quantitative mineralogy to the oil and gas, manufacturing, forensic science, climate change, geohazard and health sectors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), GeoRef, CaPlus / SciFinder, Inspec, Astrophysics Data System, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Geochemistry and Geophysics*) / CiteScore - Q2 (*Geology*)
