

## Special Issue

# Gold–Polymetallic Deposits in Convergent Margins

### Message from the Guest Editors

Gold–polymetallic deposits associated with plate tectonic evolution represent significant sources of economically important metals that are essential for modern society. Their genesis is linked to magmatic and hydrothermal processes arising from diverse subduction to collision tectonic regimes generated in convergent margins. This Special Issue aims to advance the understanding of gold–polymetallic mineralization near convergent settings by focusing on the geochemical, spectrum, geochronology and tectonic controls of ore formation. Contributions include, but are not limited to, (1) the geochemistry and genesis of gold–polymetallic deposits in orogenic contexts; (2) the mineral chemistry of ore, gangue, and accessory minerals that provide insights into ore-forming processes; (3) fluid–rock interaction mechanisms and their implications for metal transport and precipitation; (4) geochronological constraints on the timing and evolution of mineralizing events; (5) the ore and host rock spectrum for exploration; and (6) the application of innovative approaches to unravel the evolution of ore systems.

## About the Journal

### Message from the Editor-in-Chief

*Minerals* welcomes submissions that report basic and applied research in mineralogy. Research areas of traditional interest are mineral deposits, mining, mineral processing and environmental mineralogy. The journal footprint also includes novel uses of elemental and isotopic analyses of minerals for petrology, geochronology and thermochronology, thermobarometry, ore genesis and sedimentary provenance. Contributions are encouraged in emerging research areas such as applications of quantitative mineralogy to the oil and gas, manufacturing, forensic science, climate change, geohazard and health sectors.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), GEOBASE, GeoRef, CaPlus / SciFinder, Inspec, Astrophysics Data System, AGRIS, and other databases.

#### Journal Rank:

JCR - Q2 (Mining and Mineral Processing) / CiteScore - Q1 (Geology)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.7 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the second half of 2025).
