# Special Issue

# Potentially Toxic Elements in Soils Affected by Metal Mining and Processing, 2nd Edition

## Message from the Guest Editors

The production of metals has always been and remains an important constituent in the development of civilization. Mining of metal ores, as well as their processing, which involves various methods of concentration and smelting, belong to those human activities that strongly affect the environment. They usually lead to their considerable enrichment in potentially toxic elements, such as heavy metals and metalloids...potentially toxic metals and metalloids that have accumulated in soils for decades or centuries can still pose a considerable risk to human health and ecosystems. Their transformations can lead to either beneficial or detrimental effects. This Special Issue of *Minerals* welcomes works dealing with various problems related to soil contamination in the sites affected by metal ore mining and processing, including weathering of metal(loid)-hosting minerals, biogeochemistry of potentially toxic elements in soils, their release into water and uptake by plants, and assessment of associated environmental risk, as well as the methods of soil remediation.

## Guest Editors

Prof. Dr. Anna Karczewska

Institute of Soil Science and Environmental Protection, Wrocław University of Environmental and Life Sciences, 50-375 Wroclaw, Poland

Prof. Dr. Karolina Lewińska

Environmental Remote Sensing and Soil Science Research Unit, Adam Mickiewicz University in Poznań, 61-712 Poznan, Poland

## Deadline for manuscript submissions

# About the Journal

## Message from the Editor-in-Chief

*Minerals* welcomes submissions that report basic and applied research in mineralogy. Research areas of traditional interest are mineral deposits, mining, mineral processing and environmental mineralogy. The journal footprint also includes novel uses of elemental and isotopic analyses of minerals for petrology, geochronology and thermochronology, thermobarometry, ore genesis and sedimentary provenance. Contributions are encouraged in emerging research areas such as applications of quantitative mineralogy to the oil and gas, manufacturing, forensic science, climate change, geohazard and health sectors.

## Editor-in-Chief

Prof. Dr. Leonid Dubrovinsky
Bayerisches Geoinstitut, University Bayreuth, D-95440 Bayreuth, Germany

## Author Benefits

### High Visibility:

indexed within Scopus, SCIE (Web of Science), GEOBASE, GeoRef, CaPlus / SciFinder, Inspec, Astrophysics Data System, AGRIS, and other databases.

### Journal Rank:

JCR - Q2 (Mining and Mineral Processing) / CiteScore - Q1 (Geology)

### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.7 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the second half of 2025).
