

## Special Issue

# Accessory Minerals in Silicic Igneous Rocks

### Message from the Guest Editor

Although minor in abundance and typically small in size, accessory minerals are of fundamental importance in deciphering the history of magmatic–hydrothermal systems. They may inherit information from magma sources, monitor the evolution of fractionating melts, and record information on mixing/mingling/contamination of melts. Accessory minerals constitute important geochronometers and essentially govern the enrichment/depletion of economically relevant elements. [...] This Special Issue invites contributions that deal with accessory minerals and their behaviour during the entire evolution of silicic magmatic–hydrothermal systems, from the time/source of melting through fractionation/mixing/mingling of the generated magma until the time/place of crystallization/solidification, expelling of fluids and eventual generation of mineral deposits. We welcome contributions that use accessory minerals for dating the crystallization and alteration ages of rocks, reconstruct their  $P$ – $T$ – $X$  conditions during magma evolution, and monitor their metallogenic fertility.

## About the Journal

### Message from the Editor-in-Chief

*Minerals* welcomes submissions that report basic and applied research in mineralogy. Research areas of traditional interest are mineral deposits, mining, mineral processing and environmental mineralogy. The journal footprint also includes novel uses of elemental and isotopic analyses of minerals for petrology, geochronology and thermochronology, thermobarometry, ore genesis and sedimentary provenance. Contributions are encouraged in emerging research areas such as applications of quantitative mineralogy to the oil and gas, manufacturing, forensic science, climate change, geohazard and health sectors.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), GeoRef, CaPlus / SciFinder, Inspec, Astrophysics Data System, AGRIS, and other databases.

#### Journal Rank:

JCR - Q2 (Mining and Mineral Processing) / CiteScore - Q1 (Geology)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.2 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2025).
