Elemental and Isotope Geochemistry of the Earth's Critical Zone

Message from the Guest Editors

The Earth's critical zone is the supergene environment where complex processes involving rocks, sediments, soil, water, air, and living organisms are precursors for geobiological reactions. Elemental and isotopic analyses of geological and biological matrices are of fundamental importance in the study of the genesis and evolution of the Earth's critical zone. Geochemical tracers represent powerful tools for the identification of source areas and pathways that link sources and sinks. Emphasis will be given to studies that explore geochemical fractionations between lithosphere, pedosphere, rhizosphere, hydrosphere, and atmosphere. We also encourage contributions dealing with the use of elemental and isotope compositions to provide information:

- On natural (geogenic) geochemical backgrounds and for the identification of anthropogenic contribution of potentially toxic elements (PTE), such as heavy metals.
- On specific uses of georesources (soils, water, ores) that have to be exploited with conscious and sustainable approaches.

About the Journal

Message from the Editor-in-Chief

Minerals welcomes submissions that report basic and applied research in mineralogy. Research areas of traditional interest are mineral deposits, mining, mineral processing and environmental mineralogy. The journal footprint also includes novel uses of elemental and isotopic analyses of minerals for petrology, geochronology and thermochronology, thermobarometry, ore genesis and sedimentary provenance. Contributions are encouraged in emerging research areas such as applications of quantitative mineralogy to the oil and gas, manufacturing, forensic science, climate change, geohazard and health sectors.

Editor-in-Chief

Prof. Dr. Leonid Dubrovinsky

Bayerisches Geoinstitut, University Bayreuth, D-95440 Bayreuth,
Germany

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), GeoRef, CaPlus / SciFinder, Inspec, Astrophysics Data System, AGRIS, and other databases.

Journal Rank:

JCR - Q2 (Mining and Mineral Processing) / CiteScore - Q1 (Geology)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.2 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2025).
