Characterization and Provenance of Archaeological Materials Using Multi-Method Analysis

Message from the Guest Editors

Archaeological objects allow us to look back into history. Each artefact carries within itself important information. Knowing about our past gives us the chance for a better future. It is no wonder that people have tried for many years to gain a better understanding of our past through the multi-method analysis of archaeological objects. However, we live in a time when science is advancing rapidly; so, when talking about the characterization and provenance of archaeological objects, what methods should one choose? Is there one or a few techniques that can offer a complete understanding of all things related to the archaeological material, or is this a multi-faceted question that has no definitive answer? We hope to gather a collection of top-level scientific papers that can shed light on the current status and future perspectives in terms of complex and complete characterization and provenance of archaeological materials. Both original research articles and reviews are welcome for this Special Issue.

About the Journal

Message from the Editor-in-Chief

Minerals welcomes submissions that report basic and applied research in mineralogy. Research areas of traditional interest are mineral deposits, mining, mineral processing and environmental mineralogy. The journal footprint also includes novel uses of elemental and isotopic analyses of minerals for petrology, geochronology and thermochronology, thermobarometry, ore genesis and sedimentary provenance. Contributions are encouraged in emerging research areas such as applications of quantitative mineralogy to the oil and gas, manufacturing, forensic science, climate change, geohazard and health sectors.

Editor-in-Chief

Prof. Dr. Leonid Dubrovinsky

Bayerisches Geoinstitut, University Bayreuth, D-95440 Bayreuth,

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), GeoRef, CaPlus / SciFinder, Inspec, Astrophysics Data System, AGRIS, and other databases.

Journal Rank:

JCR - Q2 (Mining and Mineral Processing) / CiteScore - Q1 (Geology)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.2 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2025).
