

## Special Issue

# Genesis of Mississippi Valley-Type Ore Deposits

### Message from the Guest Editors

Mississippi Valley-type (MVT) ore deposits are important targets worldwide, especially in countries utilizing their mineral resources to create job opportunities and develop infrastructure...The formation of MVT ore is a complex process involving the concomitant interplay between several factors within the subsurface, including basin evolution, tectonic compression, geochemical evolution of basinal brines, organic matter maturation, fluid pathways and transport, and geodynamic settings that control the distribution and deposition of the exploited ore. Supergene processes are also important in the redistribution and reconcentration of critical metals during fluid-rock interactions. However, there are still fundamental gaps in our understanding of the genesis of MVT deposits...The goal of this Special Issue is to gather relevant contributions (original research articles and review papers) that offer insights into the geological processes that lead to the formation of MVT ore deposits. We would like to cordially invite you to consider submitting your manuscript to this Special Issue.

## About the Journal

### Message from the Editor-in-Chief

*Minerals* welcomes submissions that report basic and applied research in mineralogy. Research areas of traditional interest are mineral deposits, mining, mineral processing and environmental mineralogy. The journal footprint also includes novel uses of elemental and isotopic analyses of minerals for petrology, geochronology and thermochronology, thermobarometry, ore genesis and sedimentary provenance. Contributions are encouraged in emerging research areas such as applications of quantitative mineralogy to the oil and gas, manufacturing, forensic science, climate change, geohazard and health sectors.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), GEOBASE, GeoRef, CaPlus / SciFinder, Inspec, Astrophysics Data System, AGRIS, and other databases.

#### Journal Rank:

JCR - Q2 (Mining and Mineral Processing) / CiteScore - Q1 (Geology)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.7 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the second half of 2025).
