Ore Mineralizations and Tectonic Processes in Mafic-Ultramafic Rocks

Message from the Guest Editor

Mineralizations and ore-deposits in mafic-ultramafic complexes (i.e., oceanic lithosphere, subducted oceanic crust, and mantle wedge) are strictly controlled by tectonic processes and linked to brittle and ductile structures. Fractures and cracks within the rocks represent important pathways for fluid circulation that triggers alteration and metasomatism of the protolites, breakdown of primary minerals, metal mobilization, and subsequent formation of new mineral assemblages within stockwork to sheeted extensional vein networks. Deformation during tectonic and/or metamorphic evolution of mafic-ultramafic complexes can induce re-concentration and thickening of pre-existing mineralizations, resulting in lens-shaped to boudin-like ore bodies locally achieving economic importance.

About the Journal

Message from the Editor-in-Chief

Minerals welcomes submissions that report basic and applied research in mineralogy. Research areas of traditional interest are mineral deposits, mining, mineral processing and environmental mineralogy. The journal footprint also includes novel uses of elemental and isotopic analyses of minerals for petrology, geochronology and thermochronology, thermobarometry, ore genesis and sedimentary provenance. Contributions are encouraged in emerging research areas such as applications of quantitative mineralogy to the oil and gas, manufacturing, forensic science, climate change, geohazard and health sectors.

Editor-in-Chief

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), GEOBASE, GeoRef, CaPlus / SciFinder, Inspec, Astrophysics Data System, AGRIS, and other databases.

Journal Rank:

JCR - Q2 (Mining and Mineral Processing) / CiteScore - Q1 (Geology)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.7 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the second half of 2025).
