

Innovative Modelling Approaches in Agricultural Systems and Food Processes

Guest Editors:

Dr. Jose A. Egea

Dr. Alberto Garre

Dr. Alejandro Galindo

Prof. Dr. Pablo S. Fernández-Escamez

Deadline for manuscript
submissions:
closed (31 October 2021)

Message from the Guest Editors

Agricultural and food systems management is crucial to ensure feeding of a growing world population while keeping or even improving key issues like health, safety and environmental sustainability. While important advances in the last century have been done regarding quantification and mathematical modelling of agri-food processes, the continuous development of basic science opens new gaps to be covered. Agri-food systems are biological systems with an inherent dynamic and non-linear nature. Interactions among different systems and with the environment make the modelling process quite complex.

This Special Issue aims to develop and explore modelling tools applicable to agricultural and food systems to support researchers in different areas, food scientists, engineers, and agri-food policy managers. It is not limited to the development and validation of novel mathematical models, but covers every step in the modelling process. For instance, (optimal) experiment design, decision-aiding tools, optimization, big data & machine learning, or software development are also of interest.

Message from the Editorial Board

We encourage you to contribute a research or comprehensive review article for consideration and publication in *Modelling* (ISSN 2673-3951), an international open access journal, which is published quarterly online by MDPI. The editorial board and staff of *Modelling* are dedicated to providing an advanced forum for studies related to the development and applications of modelling and simulation techniques. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within ESCI (Web of Science), Scopus, Ei Compendex, EBSCO and other databases.

Rapid Publication: manuscripts are peer-reviewed and a first decision is provided to authors approximately 24.9 days after submission; acceptance to publication is undertaken in 3.9 days (median values for papers published in this journal in the second half of 2025).
