Message from the Guest Editors

Dear Colleagues,

Colorants include dyes and pigments. Colorants have structures which contain delocalized systems with conjugated double bonds called chromophore and color aids called auxochromes. Based on their origin, colorants are classified as either natural or synthetic.

This Special Issue aims to collect review papers covering the more recent developments in the field in order to provide readers with an overview of the relevant contributions to the development of the colorant field. Papers can cover studies related to all aspects of natural and synthetic colorant chemistry, analysis, properties, and applications, including (but not limited to) natural colorants, food colorants, and chromophore/luminescence/fluorescence.

Message from the Editor-in-Chief

As the premier open access journal dedicated to experimental organic chemistry, and now in its 25th year of publication, the papers published in *Molecules* span from classical synthetic methodology to natural product isolation and characterization, as well as physicochemical studies and the applications of these molecules as pharmaceuticals, catalysts and novel materials. Pushing the boundaries of the discipline, we invite papers on multidisciplinary topics bridging biochemistry, biophysics and materials science, as well as timely reviews and topical issues on cutting edge fields in all these areas.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), [Reaxys](#), [CaPlus / SciFinder](#), [MarinLit](#), [AGRIS](#), and [other databases](#).

Journal Rank: JCR - Q2 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Organic Chemistry)
