### Message from the Guest Editors

The structural bioinformatics of metalloproteins is important for providing links between 3D structure and biological function, with particular focus on the role of metal ions and how this role has evolved and become diversified among organisms. In this Special Issue, we wish to cover the most recent advances in all these aspects of computational methods for the study of metalloproteins by hosting a mix of original research articles and short critical reviews.

## Message from the Editor-in-Chief

As the premier open access journal dedicated to experimental organic chemistry, and now in its 25th year of publication, the papers published in *Molecules* span from classical synthetic methodology to natural product isolation and characterization, as well as physicochemical studies and the applications of these molecules as pharmaceuticals, catalysts and novel materials. Pushing the boundaries of the discipline, we invite papers on multidisciplinary topics bridging biochemistry, biophysics and materials science, as well as timely reviews and topical issues on cutting edge fields in all these areas.
