Message from the Guest Editor

G-quadruplexes (G4s) are nucleic acids secondary structures that form in DNA or RNA guanine (G)-rich strands. In the recent years, the presence of G4s in microorganisms has attracted increasing interest. In prokaryotes G4 sequences have been reported in several human pathogens and bacterial species present in the environment. Bacterial enzymes able to process G4s have also been identified. In viruses, G4s have been suggested to be involved in key steps of the viral life cycle: they have been associated with the human immunodeficiency virus (HIV), herpes simplex virus 1 (HSV-1), the human papilloma, Zika, Ebola, hepatitis C virus and other viruses' genome. G4 binding proteins and mRNA G4s have been implicated in the regulation of the viral genome replication and translation. G4 ligands have been developed and tested both as tools to study the complexity of G4-mediated mechanisms in the viral life cycle, and as therapeutic agents. Moreover, oligonucleotides that fold into G4 have been found to be active against several microorganisms. This special issue will focus on G4s involved in microorganisms addressing all the above aspects.

an Open Access Journal by MDPI

Editor-in-Chief

Prof. Dr. Thomas J. Schmidt

Münster, Germany

Message from the Editor-in-Chief

As the premier open access journal dedicated to experimental organic chemistry, and now in its 25th year of publication, the papers published in *Molecules* span from classical synthetic methodology to natural product isolation and characterization, as well as physicochemical studies and the applications of these molecules as pharmaceuticals, catalysts and novel materials. Pushing the boundaries of the discipline, we invite papers on multidisciplinary topics bridging biochemistry, biophysics and materials science, as well as timely reviews and topical issues on cutting edge fields in all these areas.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), [Reaxys](#), [CaPlus / SciFinder](#), [MarinLit](#), [AGRIS](#), and [other databases](#).

Journal Rank: JCR - Q2 (Chemistry, Multidisciplinary) / CiteScore - Q1 (Organic Chemistry)
