submissions:

**30 September 2019**

### Message from the Guest Editors

Dear Colleagues,

Cancer is a leading cause of death worldwide, accounting for about 9.6 million deaths in 2018. The percentage of mortality, mainly due to the lack of a timely diagnosis or to chemotherapy-driven side effects, remains challenging today. Nanoparticle-based precision medicine represents a very attractive tool, as it able to shape the prevention, diagnosis, and therapy of oncological diseases based on the characteristics of an individual or of a limited group of patients. This Special Issue aims to provide a forum for the dissemination of the latest information on new approaches and methods for the prevention, early detection, and treatment of cancer, based on precision nanomedicine.

## Message from the Editor-in-Chief

As the premier open access journal dedicated to experimental organic chemistry, and now in its 22nd year of publication, the papers published in *Molecules* span from classical synthetic methodology to natural product isolation and characterization, as well as physicochemical studies and the applications of these molecules as pharmaceuticals, catalysts and novel materials. Pushing the boundaries of the discipline, we invite papers on multidisciplinary topics bridging biochemistry, biophysics and materials science, as well as timely reviews and topical issues on cutting edge fields in all these areas.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High visibility:** indexed by the Science Citation Index Expanded (Web of Science), MEDLINE (PubMed), Scopus and other databases.

**Rapid publication:** manuscripts are peer-reviewed and a first decision provided to authors approximately 12.6 days after submission; acceptance to publication is undertaken in 4.4 days (median values for papers published in this journal in the second half of 2018).
