Natural products are a rich source of novel biologically/pharmacologically-active compounds. Due to their high structural diversity and complexity, they represent interesting structural scaffolds that can offer promising candidates for the study of biologically-active source of new drugs, functional foods and food additives. In recent years, great effort has been devoted to the qualitative and quantitative analysis of plant extracts and bioactive metabolites.

This Special Issue welcomes original research and reviews of literature on all aspects of the analysis of plant extracts and bioactive compounds.

Message from the Editor-in-Chief

As the premier open access journal dedicated to experimental organic chemistry, and now in its 25th year of publication, the papers published in *Molecules* span from classical synthetic methodology to natural product isolation and characterization, as well as physicochemical studies and the applications of these molecules as pharmaceuticals, catalysts and novel materials. Pushing the boundaries of the discipline, we invite papers on multidisciplinary topics bridging biochemistry, biophysics and materials science, as well as timely reviews and topical issues on cutting edge fields in all these areas.
