Message from the Guest Editor

Dear Colleagues,

Research on metal nanoclusters has seen impressive progress in recent decades, thanks to breakthroughs in both experimental and theoretical approaches. Metal nanoclusters can be prepared using a physical or chemical approach. Experimental syntheses begin to be able to control size and structure by adjusting the reaction parameters, precursor composition, and reducing and stabilizing agents. Investigating the intrinsic properties of metal nanoclusters remains a very active domain of research, especially concerning the characterization of the structure, the reactivity, and the electronic and optical properties. Additionally, studying the effects of the environment on the chemical and physical properties of metal nanoclusters is now a major challenge for both theoreticians and experimentalists.

This Special Issue aims to assemble the recent relevant scientific achievements in the field of metal nanoclusters and their structure and properties (i.e., synthesis, stability, electronics, optics, reactivity, electrochemical, etc.). Both experiments and theoretical calculations are welcome.

As the premier open access journal dedicated to experimental organic chemistry, and now in its 22nd year of publication, the papers published in *Molecules* span from classical synthetic methodology to natural product isolation and characterization, as well as physicochemical studies and the applications of these molecules as pharmaceuticals, catalysts and novel materials. Pushing the boundaries of the discipline, we invite papers on multidisciplinary topics bridging biochemistry, biophysics and materials science, as well as timely reviews and topical issues on cutting edge fields in all these areas.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High visibility: indexed by the Science Citation Index Expanded (Web of Science), MEDLINE (PubMed), Scopus and other databases.

Rapid publication: manuscripts are peer-reviewed and a first decision provided to authors approximately 13.1 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2019).
