Message from the Guest Editor

Dear Colleagues,

This Special Issue is dedicated to aromatic organic compounds containing one or more nitrogen atoms. These are five or six-membered rings, fused or not fused onto other rings, and containing nitrogen only or in combination with oxygen or sulfur. A surfeit of such compounds occurs in the chemical literature, including many natural substances and bioactive synthetic compounds. I am therefore looking forward to receiving timeless research articles, communications and reviews detailing the latest advances in synthetic methods, target oriented synthesis, applications, and biological evaluation of such small molecule heterocycles.

Message from the Editor-in-Chief

As the premier open access journal dedicated to experimental organic chemistry, and now in its 25th year of publication, the papers published in *Molecules* span from classical synthetic methodology to natural product isolation and characterization, as well as physicochemical studies and the applications of these molecules as pharmaceuticals, catalysts and novel materials. Pushing the boundaries of the discipline, we invite papers on multidisciplinary topics bridging biochemistry, biophysics and materials science, as well as timely reviews and topical issues on cutting edge fields in all these areas.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), [Reaxys](#), [CaPlus / SciFinder](#), [MarinLit](#), [AGRIS](#), and [other databases](#).

Journal Rank: JCR - Q2 (*Chemistry, Multidisciplinary*) / CiteScore - Q1 (*Chemistry (miscellaneous)*)
