Recent Advances in Nitrogen-Containing Aromatic Heterocycles

Message from the Guest Editor

Dear Colleagues,

This Special Issue is dedicated to aromatic organic compounds containing one or more nitrogen atoms. These are five or six-membered rings, fused or not fused onto other rings, and containing nitrogen only or in combination with oxygen or sulfur. A surfeit of such compounds occurs in the chemical literature, including many natural substances and bioactive synthetic compounds. I am therefore looking forward to receiving timeless research articles, communications and reviews detailing the latest advances in synthetic methods, target oriented synthesis, applications, and biological evaluation of such small molecule heterocycles.

Prof. Dr. Fawaz Aldabbaagh
Guest Editor

Deadline for manuscript submissions:
closed (21 December 2018)
The Journal of Molecules aims to provide a platform for research in the field of molecules, encompassing not only their synthesis but also their use in various applications such as catalysis, biology, and materials science. The journal welcomes a wide range of contributions, including experimental and theoretical studies, as well as reviews and discussions on the latest developments.

**Author Benefits**

**Open Access:**— free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Reaxys, Embase, CaPlus / SciFinder, MarinLit, AGRIS, and other databases.

**Journal Rank:** JCR - Q2 (Chemistry, Multidisciplinary) / CiteScore - Q1 (Chemistry (miscellaneous))
