Deadline for manuscript
submissions:

closed (30 September 2019)

Message from the Guest Editor

The treatment of diseases requires the design of drug molecules with defined properties in order to modulate the associated therapeutic targets. Drug design is therefore a key component of the drug discovery and development process to provide pharmacologically active substances with a particular function. Different approaches have been developed for the rational design of drug molecules with targeted properties: Structure-based, ligand-based, fragment-based, computer-aided, and de novo approaches, to name a few, have emerged over time and demonstrated their value.

The design of drug molecules with tailored biological activity is a very creative process, which includes traditional small molecules as well as antibodies and biologics but also conjugates of these molecular entities.

As this multidisciplinary field is rapidly progressing, the intention of this Special Issue is to cover current developments on all aspects related to drug design by original research and review articles.

an Open Access Journal by MDPI

Münster, Germany

Message from the Editor-in-Chief

As the premier open access journal dedicated to experimental organic chemistry, and now in its 25th year of publication, the papers published in *Molecules* span from classical synthetic methodology to natural product isolation and characterization, as well as physicochemical studies and the applications of these molecules as pharmaceuticals, catalysts and novel materials. Pushing the boundaries of the discipline, we invite papers on multidisciplinary topics bridging biochemistry, biophysics and materials science, as well as timely reviews and topical issues on cutting edge fields in all these areas.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), [Reaxys](#), [CaPlus / SciFinder](#), [MarinLit](#), [AGRIS](#), and [other databases](#).

Journal Rank: JCR - Q2 (Chemistry, Multidisciplinary) / CiteScore - Q1 (Chemistry (miscellaneous))
