Deadline for manuscript
submissions:

closed (30 November 2019)

Message from the Guest Editor

Dear colleagues,

Heterocyclic compounds, also called heterocycles, are part of a major class of organic chemical compounds characterized by the fact that some or all of the atoms in their molecules are joined in rings containing at least one atom of an element other than carbon (C). Organometallic chemistry plays an important role in modern approaches for the synthesis of heterocycles. Heterocyclic compounds include many of the biochemical materials that are essential to life. Modern society is dependent on synthetic heterocycles for use as drugs with anticancer agents and antibiotics.

This Special Issue of *Molecules* welcomes submissions of research articles and reviews that concern the design, synthesis and docking studies of new families with potential antitumor and/or antimicrobial activity.

Message from the Editor-in-Chief

As the premier open access journal dedicated to experimental organic chemistry, and now in its 25th year of publication, the papers published in *Molecules* span from classical synthetic methodology to natural product isolation and characterization, as well as physicochemical studies and the applications of these molecules as pharmaceuticals, catalysts and novel materials. Pushing the boundaries of the discipline, we invite papers on multidisciplinary topics bridging biochemistry, biophysics and materials science, as well as timely reviews and topical issues on cutting edge fields in all these areas.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), [Reaxys](#), [CaPlus / SciFinder](#), [MarinLit](#), [AGRIS](#), and [other databases](#).

Journal Rank: JCR - Q2 (*Chemistry, Multidisciplinary*) / CiteScore - Q1 (*Chemistry (miscellaneous)*)
