Message from the Guest Editor

Dear Colleagues,

Metalating agents are essential in most synthetic chemists' toolkits since they allow the selective and efficient functionalization of a wide range of organic substrates including aliphatic and (hetero) aromatic compounds. The growing need for complex scaffolds and fine chemicals, urges the chemists to design always more sophisticated metalating agents including main group metals. This Special Issue is intended to cover the last developments in the field focusing not only on the synthetic applications but also on reactivity, structural and mechanistic investigations from the experimental and theoretical point of views.

Message from the Editor-in-Chief

As the premier open access journal dedicated to experimental organic chemistry, and now in its 22nd year of publication, the papers published in *Molecules* span from classical synthetic methodology to natural product isolation and characterization, as well as physicochemical studies and the applications of these molecules as pharmaceuticals, catalysts and novel materials. Pushing the boundaries of the discipline, we invite papers on multidisciplinary topics bridging biochemistry, biophysics and materials science, as well as timely reviews and topical issues on cutting edge fields in all these areas.

Author Benefits

Open Access:—free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed by the [Science Citation Index Expanded](#) (Web of Science), [MEDLINE](#) (PubMed), [Scopus](#) and [other databases](#).

Rapid Publication: manuscripts are peer-reviewed and a first decision provided to authors approximately 12.3 days after submission; acceptance to publication is undertaken in 2.5 days (median values for papers published in this journal in the first half of 2020).
