Deadline for manuscript submissions: 30 November 2019

Message from the Guest Editor

The use of plants, plant products, marine compounds, mushrooms, bee products (honey, propolis, bee pollen) are examples of materials that have been the target of many studies in order to find effective anti-inflammatory compounds or extracts. Such studies include not only the isolation and identification of compounds but also the mechanisms involved in the anti-inflammatory activity.

This Special Issue “Anti-Inflammatory Activity of Natural Products” invites researchers to contribute to original research or review articles related to the anti-inflammatory activity, including mechanisms and pharmacological characterization, of extracts from mushrooms, bee products, marine or plant products, their fractions or purified substances (extraction procedures, isolation, and identification).
Message from the Editor-in-Chief

As the premier open access journal dedicated to experimental organic chemistry, and now in its 22nd year of publication, the papers published in *Molecules* span from classical synthetic methodology to natural product isolation and characterization, as well as physicochemical studies and the applications of these molecules as pharmaceuticals, catalysts and novel materials. Pushing the boundaries of the discipline, we invite papers on multidisciplinary topics bridging biochemistry, biophysics and materials science, as well as timely reviews and topical issues on cutting edge fields in all these areas.
